

Assignment #5 - Frontend Test

Anders Kalhauge and Martin Vestergaard

Fall 2020

Front-end test and BDD

Selenium IDE

- Use Selenium IDE to test that you can find a youtube video
- Use selenium IDE to test tha tyou can fill out this form:
 - `https://sqengineer.com/practice-sites/basic-web-elements/`
 - Make sure to capture the “Read this text and print the output”

WebDriver

- Use WebDriver to solve `https://sqengineer.com/practice-sites/practice-tables-selenium/`
- Use WebDriver to find youtube videos about cats uploaded today. Print the URL of the first 10 videos to a log file.

Cucumber

- Complete the Cucumber tutorial: <https://cucumber.io/docs/guides/10-minute-tutorial/>
- Extend your booking system with a couple of new features by using test-first with Cucumber. Inspiration:
 - It should be possible to create new customers and employees
 - Employees should have “work time”. Bookings can not be created outside of an employee’s work time. For example, it should be possible to create a work time block on Monday 23/11-2020 from 08:00 - 16:00 – trying to create a booking from 15:00 - 16:30 should then fail.
 - Creating a booking with the same employee on overlapping times must fail
 - Creating work time on sunday must fail

Hand-in

On peergrade. The hand-in should be a link to a repository including a section in `README.md` named Assignment 5 with description of tests and process.
